THE PEOPLE HAVE A RIGHT TO VOICE AND COUNTERVOICE

~ No. 17/18: SCIENCES ~

INTRO

The Big-Bang theory prevalent in science was essentially deduced from an observation by the American astronomer Edwin Hubble (1889-1953). In 1929 he discovered that the splitting of light of distant galaxies might reveal a color shift towards red because the distance between the light source and the observer would constantly increase.*

Other scientists derived that the universe must have been concentrated on a single point and still expands on an ongoing basis. Calculated back everything must have been created about 15 billion years ago from a single original mass. This in turn leads to the "Big-Bang theory" that was presented in 1931 by the Belgian astrophysicist Georges Edouard Lemaitre at a congress in London.

However Hubble himself did not draw the physical conclusion of an expansion (enlargement) of the universe. He suspected a hitherto undiscovered natural principle behind the redshift. This V&C sheds light on unproven scientific theories that are sold as facts, as well as alternative explanatory models that are suppressed. [1]

The Editors (kno./mol.)

** In astronomy called "redshift"*

Standard model of cosmology* a mistake?

oli. When speaking of forces acting in the universe, astrophysics almost exclusively considers gravity** as the only effective force. As an alternative explanatory model the "Electric-Universe Theory" (in short EU) – supported by many physicists and scientists – assumes that predominantly electromagnetic forces have played a role in the universe. According to this theory there

was no initial "big bang", no expansion of the universe and the EU theory is in addition also not compatible with Albert Einstein's general Theory of Relativity. If electromagnetic forces were simply ignored and the gravitational force – weaker by a factor of 10^{39} – is used as an explanation for all phenomena, new constructs must be invented to reasonably explain astronomical observations (such

as black holes, dark matter, dark energy, etc.). According to the EU-theory hurricanes as well as solar systems are supported by streams of electrons. This similarity also indicates that a universal electromagnetic force acts and gravity is only a by-product of this force. [2]

*Science of the origin and evolution of the universe

**Attraction between the masses of two bodies

Standard model of physics might be illogical

brö. The "Thunderbolts Project" is a multidisciplinary collaboration established in 2004 by recognized scientists, independent researchers and interested individuals. According to their own statement its main mission is to explore the model of the Elec-

tric Universe. The standard model of physics that claims that an empty space can expand and gravitational forces dominate the shape of the universe challenges logic tremendously. According to the Thunderbolts project the pure gravity model

– and with it the theory of the Big Bang (that is said to have occurred 13.7 billion years ago) – is no longer to be considered as a valid explanation of the universe. [3]

***"There are no isolated elements in the universe
(held together coincidentally by gravitation).
From the smallest particles up to the largest stellar systems,
all are connected by a network of electric circuits.
This unites all of nature, the organization of all heavenly bodies,
the birth of planets and in our own world the weather phenomena
and the revival of biological organisms."***

David Talbot, American author and Wallace Thornhill, Australian scientist (from "Thunderbolts of the Gods")

Nikola Tesla – Free energy must not be

stl. Nikola Tesla was one of the greatest geniuses of the 20th century. As an inventor, physicist and electrical engineer he was far ahead of his time. He registered more than 111 patents during his lifetime (1856-1943) and designed technologies that laid the foundation for many of the things we use today (fluorescent tube, radio, alternating current, radar, etc.). However, when he registered his patent for a free-energy

machine in 1924 suddenly all investors quit and he lost his orders and funding. He died impoverished and in debt in a New York hotel room. Immediately after his death government organizations invaded his lab and confiscated his records and diaries. He dreamed of complimentary Free-Energy for all. Did the profit oriented energy companies finally put an end to his endeavors? [4]

Virus alert! Countervoice web sites seem to be at high risk of virus attacks. Hand-to-Hand Express avoids this danger - information concise and to the point, without using the internet - Advice for all who still consult the links: never access the internet from a PC with sensitive data.

You have important news? Write a short Hand-to-Hand Express article. – Clearly state the major point and name the responsible people! – Sources if possible without internet! – Then send your short article to SuG@infopool.info

Bedini's free-energy devices banned

Is. John Bedini, a US electrical engineer and inventor, began his work with Tesla's theories of radiation energy a few decades ago. He invented a range of battery chargers which produce more energy than they need to run. He announced he would offer

them for sale at low cost. Soon after that his laboratory was raided and he was admonished to stop producing these machines. For his own safety he had to abandon promoting his free-energy devices. [5]

US administration stops free-energy generators

Is. Modern-day inventor Adam Trombly was inspired by Tesla's work and built a dynamo, a DC generator that took electrical energy directly out of the air. Trombly was invited to demonstrate the function of his generators to

the United Nations and the US Senate. However, these demonstrations were obstructed by the US administration under George W. Bush and eventually stopped. Then the device was confiscated during a government raid. [6]

9/11: Experiment with directed-energy weapon?

ea. According to US materials scientist Dr. Judy Wood there is the well-founded suspicion that "for the destruction of the World Trade Center on 9/11/2001 not kinetic energy (such as explosives) but electromagnetic energy, respectively Tesla waves were used." Strange physical phenomena are said to have occurred that cannot be explained by "controlled demolition by ex-

plosives", as for instance, the enormous speed of collapse of the towers, the "pulverization" during the fall, flames without sensible heat (paper did not burn), or the so-called Hutchison effect, i.e. metal fusing with other combustible materials without burning these. The question arises whether 9/11 could have been an experiment with a directed-energy weapon. [8]

Vanished prehistoric-code discovery

srz. At the end of the 80s, the Swiss researchers Dr. Guido Ebner and Heinz Schürch made a sensational discovery at the laboratories of the Pharma giant Ciba-Geigy in Basel (today Novartis). In laboratory experiments they exposed grain as well as fish eggs to an electrostatic field*. Result: Totally unexpected prehistoric forms started growing. They were many times more resistant and more fruitful than ordinary or genetical-

ly manipulated plants and fish. They thrived without fertilizer and pesticides or medicines. As leading producer of chemical pesticides, Ciba-Geigy found itself in a conflict of interests. Result: The discovery remains dormant in the European patent office in order to prevent reproduction outside of the company. [9]

*The electrostatic field is a special case of the electric field, generated by resting electric charges

Gigantic profit for few versus gigantic benefits for all

uzu. In his tireless research with radio waves and electrostatics, the Canadian inventor John Hutchison repeated some experiments of the physicist Nikola Tesla. With his devices he brings objects made of different materials to levitate – using little energy. In other experiments, metals change their crystalline structure by becoming jelly-like or bursting. He also managed to blend molten metal with wood without singeing the wood. He himself does not know what tremendous powers are behind it. If they could be tapped, however, their benefits would be gigantic. With materials from nature, such as stones, Hutchison is said to have built zero-point energy batteries* that are never depleted. According to his own statements, he is working

against environmental pollution with his inventions and offers help for the Third World. Everybody would be able to afford such batteries or produce them himself. But it is precisely this dissemination that is currently hindered by scientific circles, as a huge profit for the energy industry is at stake. [7]

*Zero-point energy, also called space energy, means the indefinitely available energy in the vacuum of the universe.

Bought universities and research institutes

ruk. On November 11th, 2010, the Swiss Federal Technical University of Zurich (ETH*) and the biggest producer of pesticides, Syngenta, announced in a joint media declaration that they are setting up a professorship for sustainable agricultural ecosystems. Syngenta made a "donation" of 10 million Swiss Francs to promote the chair. It seems obvious, that there is a conflict of interests. It would be more or less the same if the cigarette producer Marlboro would finance a chair for addiction prevention. [10]

*ETH = Eidgenössische Technische Hochschule

Closing Point
Contrary to all religions of the world, science denies an intelligence that has created everything and is steering it. It is said that there is no plan and everything is developing at random. To explain the development of matter by coincidence, a time period of billions of years is set. But does it make sense? To assemble a Rubik's Cube (magic cube), "coincidence" would take 27 billion years. Intelligence and consciousness can assemble it in 27 moves! It sounds like a joke that coincidence should be able to create complex structures or living creatures. It is high time to reconsider the standard models of science. [11]
