THE PEOPLE HAVE A RIGHT TO VOICE AND COUNTERVOICE

~ No. 9/20 ~

### INTRO

Every year, some 3000 personalities from business, politics, culture and research meet at the World Economic Forum in Davos. When we hear about the mottoes of these meetings, such as "Improving the state of the world: Rethinking – Redesigning – Renewing" (2010) or "Globalization 4.0: Designing global architecture in the age of the Fourth Industrial Revolution" (2019), one might think that real do-gooders are at work here. But the reality is different: Political, social and economic crises are on the rise. In addition, there are threats caused by human ingenuity in various scientific fields, which

are intertwined in complex ways: Artificial super-intelligence is supposed to take over the helm, genetic engineers are designing humans, neurotechnologies are supposed to control the human mind, and artificial pathogens terrify the world population. Is scientific research – sponsored by the leading world designers – really just interested in the well-being of humanity? The articles in this issue show the possibility that here some very special projects are to be implemented which endanger humanity... [1]

The Editors  
(kno./nm./mol./fro./mv.)

### Nursing robots a way out of the nursing crisis – but what about the human being?

**fro.** According to an expert report by the University of Bremen on behalf of the Federal Ministry of Health, German nursing homes are currently lacking 100,000 personnel as nursing staff. However, job offers are rarely accepted because the working conditions are extremely unfavorable, and the nursing staff are massively overloaded. This nursing emergency is now being addressed by the use of nursing robots. But this means nothing other than replacing human nursing staff with technical equipment. What

the people in need of care actually need are love, attention, personal conversations, a sense of community, opportunities to participate, etc. But this can only be provided by a person who has sensitivity and emotions. These areas remain out of reach of a technical device such as a nursing robot, even if an approach seems to be possible with advancing artificial intelligence – but only apparently. On this path, the human being as an emotional and communal being ultimately falls by the wayside. [3]

### Coronavirus: Dangerous or laboratory test epidemic?

**ag/ch.** Every day there are new reports on the spreading of the coronavirus. Currently there are 127,863 people that have tested positive for coronavirus worldwide, of which 68,310 people were cured and 4,718 people died (as of March 12th, 2020). According to the Robert Koch Institute (RKI), a total of 202 people died of the flu virus in Germany in the 2019/2020 flu season. According to the RKI, the coronavirus has so far led to 4 fatalities (status March 12th, 2020). Is the coronavirus really as dangerous as is propagated by the WHO, by authorities and the media? The virus specialist Dr. Claus Koehnlein comes to the conclusion that panic-mongering is being practiced with the coronavirus. Due to the very similar symptoms and course of the disease, the corona infec-

tion cannot be distinguished from a normal flu. In his opinion, the current corona virus tests are not really significant and with their help the natural, everyday mortality rate due to pneumonia would be redefined as coronavirus disease. If a patient died of pneumonia and no test for corona was performed, he had died of pneumonia. If, however, a corona test was carried out on him, he would have officially died of corona. At the time of bird-flu, patients were declared to have died from bird-flu, at the time of swine-flu from swine-flu. Currently, the number of new cases would be increasing because more and more tests were carried out. Dr. Koehnlein comes to the conclusion that the coronavirus, when viewed soberly, is a "laboratory test epidemic". [2]

### Transhumanism\* – does the future belong to machines?

**nm./mol.** Part human, part machine: cyborgs have long ceased to belong only to science fiction. Cyborgs are people whose bodies contain technology to enhance human capabilities. The plans of the transhumanists go so far as to say that the future does not belong to the natural human being, but to hybrid beings created by genetic engineering, robotics etc. – omnipotent, immortal and unlimited. This is how the influential mastermind of transhumanism and head of technical development at Google, Ray Kurzweil, describes it: "We will combine the power

of our brains, all the knowledge, skills and personal quirks that make us human, with our computer power [...] This fusion of man and machine, with the sudden explosion of machine intelligence, will lead to a world where there is no longer any distinction between biological and mechanical life, or between physical and virtual reality." With this, doors will be wide open to the control and management of humanity by anonymous programmers. [4]

\*An ideology that wants to expand the limits of human capabilities through the use of technological methods.

**Virus alert!** Countervoice web sites seem to be at high risk of virus attacks. Hand-to-Hand Express avoids this danger - information concise and to the point, without using the internet - Advice for all who still consult the links: never access the internet from a PC with sensitive data.

**You have important news?** Write a short Hand-to-Hand Express article. – Clearly state the major point and name the responsible people! – Sources if possible without internet! – Then send your short article to [SuG@infopool.info](mailto:SuG@infopool.info)

**Jeffrey Epstein: High finance sponsors controversial high-tech**

**nm./lm.** Jeffrey Epstein was a US investment banker and convicted sex offender. In 2019 he was accused of running a sex-trafficking ring with underage children for high-profile individuals. He died in prison, officially by suicide. What the public doesn't know, however, is that through a foundation he funded programs dealing with human behavior modifi-

cation, transhumanism, artificial intelligence or genetic manipulation. He supported scientists such as Martin A. Nowak, Marvin Minsky and George Church. As an active member of EDGE\*, Epstein brought together leading researchers and billionaires. Moreover, Epstein was a board member of the Rockefeller University and was a member

of the "Harvard Society for Mind, Brain and Behavior". He was also a member of influential think tanks such as the Trilateral Commission. Looking at all these connections of Epstein, it becomes clear that Epstein, who was portrayed by the media predominantly as a lone wolf pedophilic offender, was part and hub of a closely inter-

twined network of high finance and high-risk research areas. This network obviously works closely together on technologies to make natural humans manipulable and controllable. [5]

\*EDGE: This organization strives to reach the edge of knowledge, the so-called borderline sciences

**Irresponsible genetic manipulation on humans**

**mol.** A few years ago, scientists discovered a mechanism by which it is possible to modify DNA in a targeted manner. With this so-called "gene scissors" named CRISPR/Cas\*, gene sequences can be inserted or removed at will. Proponents of the technique argue that CRISPR/Cas can

be used to prevent serious hereditary diseases. Critics, however, fear abuse. Among others, Harvard professor George Church, who was supported by Jeffrey Epstein, was granted a patent for the use of the "gene scissors". He works on changing and modifying genes with the aim of

creating a superior human race. According to media information, we are still miles away from "producing" tailor-made designer babies. But there are already scientists like He Jiankui, who in 2018 claimed to have genetically manipulated twin girls before their birth with CRISPR/ Cas.

Especially precarious: Such changes in a person's genetic makeup are irreversible and can even be passed on through generations – with completely unknown consequences! [6]

\*CRISPR/Cas = DNA-cutting protein

*"Should be ashamed all who carelessly use the wonders of science and technology, and have not recorded them mentally as the cow of the botany of the plants they eat with relish."*

*Albert Einstein, Physicist (1879-1955)*

**Circular economy – recycling of human bodies?**

**kno.** More and more frequently, the topic of circular economy appears in the mainstream media. Circular economy, which is the recycling and saving of resources, sounds reasonable. However, an extremely disconcerting example shows how far some are willing to go with this "sustainable" economic model: In Seattle, in the US state of

Washington, the first composting plant for human bodies is scheduled to go into operation at the beginning of 2021. The process is said to be permitted by law in the US state of Washington as of May 1st, 2020. The composting of deceased humans would prevent the emission of CO<sub>2</sub>, which is produced during the combustion and during the

production of coffins and gravestones. This process would save one ton of CO<sub>2</sub> compared to a conventional burial. Man thus turns into a profane potting soil after his death which the relatives can use in their garden. Is this recycling of the dead consistent with human dignity or does this rather cross all ethical boundaries? [7]

**Closing Point ●**  
*All these contributions make it clear that highly courted and highly funded scientific areas are increasingly crossing red lines and that a science tending towards "megalomania" is less and less afraid of breaking ethical-moral taboos. Even in view of all the blatant violations of borders that endanger the existence of humanity, the following words of Hermann Hesse\* apply:*  
**"Remember, soft is stronger than hard, water stronger than rock, love stronger than violence."**
